    <h1>All Domesticated Animals' Life Expectancies Expected to Be Halved By
2050</h1>
  </head>
  <h2>Aug. 22, 2016</h2>
  <body>
    <p><span style="font-size: medium;">Studying how pets are being affected by
the the new technologies <br>that are affecting the environment. And they have come to a
stunning conclusion.</span>
    </p>
    <p><span style="font-size: medium;">They have found that, since the rate of our
technology evolving is drastically faster <br>than these animals can adapt, the life expectancies
of these animals might drop to <br>up to <em>half</em> their current amount by the year
<b>2050</b>. Other reasons for this potentiel drop might <br>include the large human
population crowding neighborhoods. </span>
    </p>
    <p><span style="font-size: medium;"><q>It's a shame that the animals will have
to adapt fast, or they'll die off,</q> says<br> a member of the research group who conducted
the study.</span>
    </p>
